The internet and world wide web are revolutionizing many aspects of our lives, and have become an accepted part of socioeconomic experience in developed countries. For entertainment, shopping, banking, establishing friendships, seeking information, and so on, the web is the first port of call for an increasing number of people. A few in education have been quick to see the potential of the web as a platform for delivering a variety of teaching and learning materials. Many more, however, would like to make use of the web, but lack either the time or the skills, or both. Untangled Web provides a guide for those wishing to develop their own teaching and learning resources on the web, whether for local, open or distance learning. By using this book, potential web educators can acquire some of these basic skills and save time by drawing on the experiences of the authors and avoiding the pitfalls and problems that they have encountered. The authors have gained considerable expertise in devising,

designing, constructing, testing, adapting and evaluating their own web-based instruction packages which have been developed over a number of years and involve a variety of subject areas. Untangled web is therefore very much focused on practical experience, and while it is primarily aimed at teachers in further and higher education, schoolteachers interested in using the web as a teaching and learning medium will find it useful. Untangled Web has been written by an experienced team from the Department of International Studies at the Nottingham Trent University. David Graham teaches geography and information technology; Jane McNeil is Faculty webmaster and teaches medieval history and information technology; Lloyd Pettiford teaches international relations. Innovative guide to using the web in teaching and learning, providing practical advice for lecturers and teachers on using the web as more than just a support tool

The international multi-topic conference IMTIC 2008 was held in Pakistan during April 11–12, 2008. It was a joint venture between Mehran University, Jamshoro, Sindh and Aalborg University, Esbjerg, Denmark. Apart from the two-day main event, two workshops were also held: the Workshop on Creating Social Semantic Web 2.0 Information Spaces and the Workshop on Wireless Sensor Networks. Two hundred participants registered for the main conference from 24 countries and 43 papers were presented; the two workshops had overwhelming support and over 400 delegates registered. IMTIC 2008 served as a platform for international scientists and the engineering community in general, and in particular for local scientists and the engineering community to share and cooperate in various fields of interest. The topics presented had a reasonable balance between theory and practice in multidisciplinary topics. The conference also had excellent topics covered by the keynote speeches keeping in view the local requirements, which served as a stimulus for students as well as experienced participants. The Program Committee and various other committees were experts in their areas and each paper went through a double-blind peer review process. The conference received 135 submissions of which only 46 papers were selected for presentation: an acceptance rate of 34%.

Distance learning and remote learning have been developing options within the eLearning and talent training realms for over two decades, yet distance learning has become a significant reality within the past few months, especially as the COVID-19 pandemic has forever impacted the K-12, higher education, and adult training and talent development workforce solutions. Within the rapid shift into remote and distance learning environments, the curricular design and instructional design are understood as necessary. However, there is a need to understand aspects around social learning within eLearning environments. It is important to understand the opportunity of moving towards transformative social learning environmental engagement and experiences within distance and remote learning environments to improve the ability to understand social learning in eLearning environments. eLearning Engagement in a Transformative Social Learning Environment focuses on supporting and enhancing remote and distance learning (eLearning) instructional experiences, discusses the strategic role of social learning within eLearning environments, and enhances levels of engagement, transformative learning, and talent attainment environments. This book provides insights and support towards policies and procedures within instructional and training decision making around social learning needs and support. The chapters will explore social learning opportunities and support, modeling social learning engagement, communities of practice, and instructional processes of eLearning. The intended audience is teachers, curriculum developers, instructional designers, professionals, researchers, practitioners, and students working in the field of teaching, training, and talent development.

Over a mere three decades, the video game has become the entertainment medium of choice for millions of people, who now spend more time in the interactive virtual world of games than they do in watching movies or even television. The release of new games or game-playing equipment, such as the PlayStation 2, generates great excitement and even buying frenzies. Yet, until now, this giant on the popular culture landscape has received little in-depth study or analysis. In this book, Mark J. P. Wolf and four other scholars conduct the first thorough investigation of the video game as an artistic medium. The book begins with an attempt to define what is meant by the term "video game" and the variety of modes of production within the medium. It moves on to a brief history of the video game, then applies the tools of film studies to look at the medium in terms of the formal aspects of space, time, narrative, and genre. The book also considers the video game as a cultural entity, object of museum curation, and repository of psychological archetypes. It closes with a list of video game research resources for further study.

with the aim of improving prevention, diagnosis, and interventions in health and care. This book presents accepted papers from the 2019 European Federation of Medical Informatics conference (EFMI STC 2019), held in Hanover, Germany, from 7 – 10 April 2019. More than 90 submissions were received, from which, after review, the Scientific Program Committee (SPC) accepted 50 full papers to be included in this volume of proceedings. In addition, 16 poster presentations were accepted. This year, ICT for Health Science Research was selected as the focus topic, and the conference also honors Prof. Peter Leo Reichertz (1930 – 1987), one of the founding fathers of ICT healthcare and an originator of the term Medical Informatics. The conference focuses on recent research & development supporting information systems in biomedical, translational and clinical research, as well as semantic interoperability across such systems for the purpose of data sharing and the analytics of cross-system integrated data. Papers are divided into 12 categories covering topics including digitization; data privacy; interoperability; data-driven decision support; mobile data capture; and ICT for clinical trials. The book will be of interest to all healthcare researchers and practitioners whose work involves the use of ICT.
