I did not become deeply committed to the cause of bilingualism by pure chance : my commitment stemmed from my own observations and thoughts on the communication situations that I had experienced throughout my personal and professional life. Before describing the birth of the bilingual education movement, this book recalls the gradual rise of the interest in sign language that then developed into the struggle for bilingualism, starting in the nineteen seventies and right up to the present day. This growing interest and the many different initiatives and actions that it prompted through the French bilingual movement in the final decades of the 20th century, finally led to the official recognition of French Sign Language in 2005.

During the last years a significant number of papers, books, and monographs devoted to speech and language impairments in bilingual children have been published. Different aspects and questions have been approached and today we have a relatively good understanding of the specific characteristics of the speech and language difficulties potentially observed in bilingual and multilingual children. This interest has been significantly resulted from the potential developmental and educational consequences of bilingualism. Our understanding of the communication disorders in adult populations is notoriously more limited, even though

over 50% of the adult population can speak at least another language in addition to his/her native language. That simply means that over 50% of the communication disorders observed in adults are bilingual speech and language disorders: bilingual aphasias, bilingual dementias, bilingual stuttering, etc. This book was written with the specific purpose of filling this gap. The major purpose of this book has been to integrate the state of the art on the different aspects of the communication disorders observed in adult bilinguals. The book is organised in such a way that an integrated perspective of bilingualism is presented: from the normal conditions to the pathology; from the clinical descriptions to the rehabilitation issues; from the biological factors to the cultural variables.

"Non-fluent Aphasia in a Multilingual World" is an up-to-date introduction to the language of patients with non-fluent aphasia. Recent research in languages other than English has challenged our old descriptions of aphasia syndromes: while their patterns can be recognized across languages, the structure of each language has a profound effect on the symptoms of aphasic speech. However, the basic linguistic concepts needed to understand these effects in languages other than English have rarely been part of the training of the clinician. "Non-fluent Aphasia in a Multilingual World" introduces these concepts plainly and concretely, in the context of dozens of examples from the narratives and conversations of patients speaking most of the major languages of Europe, North America and Asia. Linguistic and clinical terms are carefully defined and kept as theory neutral as possible. "Non-Fluent Aphasia in a Multilingual World" is especially useful for speech-language pathologists whose patients are immigrants and guestworkers, and for the clinician who must deal creatively with the challenges of providing aphasia diagnosis and therapy in a multicultural, multidialectal setting.

"Aphasia and Related Neurogenic Communication Disorders is designed for the graduate course on Aphasia. Part 1 of the textbook covers aphasiology, while part 2 addresses related disorders. Overall, the textbook offers an overview of aphasia and related neurogenic communication disorders by presenting important recent advances and clinically relevant information. It emphasizes Evidence Based Practice by critically reviewing the pertinent literature and its relevance for best clinical practices. Case studies in all clinical chapters illustrate key topics, and a "Future Directions" section in each chapter provides insight on where the field may be headed. The WHO ICF Framework is introduced in the beginning of the text and then reinforced and infused throughout"--

PSYCHOLOGY: FOUNDATIONS AND FRONTIERS offers a fresh and updated approach that combines the appealing content, visuals, and effective features of Douglas Bernstein's two previous introductory psychology textbooks. Focusing on active learning, the text presents important findings from established and current research, emphasizes the many ways psychological theory and research results are being applied to benefit human welfare, and integrates extensive pedagogy. The integrated pedagogical system helps students master the material by supporting the elements of the PQ4R (Preview, Question, Read, Recite, Review, and Reflect) study system. Try This activities illustrate psychological principles or phenomena by encouraging students to learn by doing. Other features designed to promote efficient learning include Linkages diagrams and sections that show how topics in

psychology are interrelated, Thinking Critically sections that apply a five-question approach to various topics, and Focus on Research sections that help students think objectively about research questions and results. To offer flexibility in a single-term course, the book includes eighteen chapters that may be assigned in whatever order meets instructors' needs. Geared for undergraduate and graduate students, Goal Writing for the Speech-Language Pathologist and Special Educator details different types of goals, essential elements of goals, how to establish goals from information garnered from evaluations, and how to write continuing goals for the field of Speech-Language Pathology and Communication Sciences. It is written for students in a Clinical Methods/Clinical Practicum course who are about to begin their clinical experience in SLP. Real-world exercises are provided throughout in order to provide realistic examples of what students may encounter in speech and hearing clinics, hospitals, and schools. Goal writing is practiced by SLPs on a daily basis, and understanding how to turn diagnostic information into therapy is a difficult, yet crucial, task. This important subject is not covered in depth in other clinical methods titles yet is a skill all students and clinicians must master.

The relationship between language and psychology is one that has been studied for centuries. Influencing one another, these two fields uncover how the human mind's processes are interrelated. *Psycholinguistics and Cognition in Language Processing* is a critical scholarly resource that examines the mystery of language and the obscurity of psychology using innovative studies. Featuring coverage on a broad range of topics, such as language acquisition, emotional aspects in foreign language learning, and speech learning model, this book is geared towards linguists, academicians, practitioners, and researchers, seeking current research on the cognitive and emotional synthesis of multilingualism.

This book presents a comprehensive set of tools for assessing the linguistic abilities of bilingual children. It aims to disentangle effects of bilingualism from those of Specific Language Impairment (SLI), making use of both models of bilingualism and models of language impairment.

*Analysis of Neurogenic Disordered Discourse Production* provides a comprehensive review and discussion of aphasia and its related disorders, their corresponding clinical discourse symptoms that speech-language pathologists and related healthcare professionals should address, and the different methods of discourse elicitation that are research- and clinically-oriented. Contemporary issues related to disordered/clinical discourse production are covered, and discussions of various treatment options in relation to discourse symptoms are included. Finally, the manifestation of discourse symptoms as a function of speakers' bilingual/multilingual status and specific considerations related to clinical assessment and intervention are explored. Readers who want to learn the background and techniques of discourse analysis, refresh their knowledge of discourse production, update their knowledge of assessment and treatment of discourse production, and learn about contemporary issues of discourse annotation and analysis using existing computer software will find this book a valuable tool. With its comprehensive coverage, it offers a thorough understanding of the nature, assessment, and remediation of discourse deficits in aphasia and related disorders. Readers will also benefit from examples throughout the book that connect theory to real-life contexts of discourse production.
