Surveillance is commonly rationalized as a solution for existing problems such as crime and terrorism. This book explores how surveillance, often disguised as risk management or harm reduction, is also at the root of a range of social and political problems. Canadian scholars from diverse disciplines interrogate the moral and ideological bases as well as the material effects of surveillance in policing, consumerism, welfare administration, disaster management, popular culture, moral regulation, news media, social movements, and anti-terrorism campaigns.

When health and safety regulatory frameworks took their

present form in the 1970s, they were seen as a triumph of welfare state intervention. Since then, as heavy industry has declined and office and retail employment have expanded, new ways of working have radically altered the context of health and safety policy. Many people have come to see health and safety interventions as an obstacle to innovation. This book aims to address the changing context of health and safety policy, exploring concerns arising within the profession and the appropriate responses. Its manifesto for reform promises to frame the debate within the professional and policy community for a generation. The result of a major research programme funded by the Institution of Occupational Safety and Health (IOSH), *Health and Safety in a Changing World* shows how health and safety policy has developed over time, how it is applied in practice and how best to make it fit-for-purpose in the 21st century. The book will be essential reading for professionals, practitioners and academic readers with an interest in the rapidly-evolving field of health and safety.

Continuing Professional Development (CPD) is the means by which the professions across the world ensure that their knowledge and skills remain up to date and relevant to changing needs and environments. CPD significantly contributes to the quality and reputation of the professions and therefore to the quality of national and international social life and economic well being.

Starting with a discussion on what CPD is, the author analyzes how professional bodies govern CPD, what support they provide to individual professionals and how they measure or evaluate what individuals do under the provenance of CPD. Continuing Professional Development explains why, up to now, CPD has been a relatively neglected subject in spite of it being carried out by millions. It argues whether a variety of perspectives or visions of CPD has held back wider public appreciation of it and if greater co-ordination by professional bodies, or the introduction of new players to the field, will change this in the future. Providing the first comprehensive study of the subject, this innovative book will be required reading for CPD professionals and researchers and is a fascinating read for all professionals, especially those involved with human resource development and management / leadership development.

Brands are everywhere. Branding is central to political campaigns and political protest movements; the alchemy of social media and self-branding creates overnight celebrities; the self-proclaimed “greening” of institutions and merchant goods is nearly universal. But while the practice of branding is typically understood as a tool of marketing, a method of attaching social meaning to a commodity as a way to make it more personally resonant with consumers, Sarah Banet-Weiser argues that in the contemporary era, brands are about culture as much as they are about economics. That, in fact, we live in a brand culture. Authentic™ maintains that branding has extended beyond a business model to become both reliant on, and reflective of, our most basic social and cultural relations. Further, these types of brand relationships have become cultural contexts for everyday living, individual identity, and personal relationships—what Banet-Weiser refers to as “brand cultures.” Distinct brand cultures, that at times overlap and compete with each other, are taken up in each chapter: the normalization of a feminized “self-brand” in social media, the brand culture of street art in urban spaces, religious brand cultures such as “New Age Spirituality” and

“Prosperity Christianity,” and the culture of green branding and “shopping for change.” In a culture where graffiti artists loan their visions to both subway walls and department stores, buying a cup of “fair-trade” coffee is a political statement, and religion is mass-marketed on t-shirts, Banet-Weiser questions the distinction between what we understand as the “authentic” and branding practices. But brand cultures are also contradictory and potentially rife with unexpected possibilities, leading Authentic™ to articulate a politics of ambivalence, creating a lens through which we can see potential political possibilities within the new consumerism.
