21/04/2014 · Immature : total neutrophil ratio (I:T ratio) and C-reactive protein are the most useful assays in detecting late-onset neonatal sepsis. I:T ratio = (bands+metamyelocytes+myelocytes) / (bands+metamyelocytes+myelocytes+neutrophils) (Bands, metamyelocyte and myelocyte counts are given as part of the manual differentiation of white blood cell count from most laboratories).
