

Technical Analysis Of The Financial Markets A Comprehensive Guide To Trading Methods And Applications Study Guide New York Institute Of Finance

"In today's high-tech trading world, it's sometimes difficult to remember what moves markets. It's not computers, fractals or neural networks. It's people - people who make decisions based on their own abilities, emotions and financial resources." "But people do not make decisions in isolation. They are influenced by friends, colleagues and the news media. In the end, most individuals become part of a crowd. That's why so few people make money in the markets; because, as every top trader knows, the crowd always loses in the end." "Winning requires the ability to recognize what the crowd is doing, and to do the opposite. If you develop this one ability alone, your success in the market is virtually assured." "In this completely revised edition of Forecasting Financial Markets - re-titled more aptly The Psychology of Technical Analysis - Tony Plummer demonstrates how to use technical analysis to track crowd psychology and to spot those exciting trades where enormous profits can be made." "Using a variety of technical approaches, Mr. Plummer shows how prices follow a discernible pattern, based on the predictable influence of the crowd. This pattern, which Mr. Plummer calls "THE PRICE PULSE" of the market, provides a workable model for describing how traders react to new, market-moving information." "Most importantly, Mr. Plummer shows how to determine what he calls "THE GOLDEN RATIO," a series of mathematically derived numbers which - together with the price pulse - enable a trader to forecast major tops and bottoms with nearly magical precision." "If this sounds too esoteric, consider the following:" "Between 1929 and 1932, the Dow Jones average fell 344 points. According to the Golden Ratio, that established an upside target of 1000. When 1000 was finally hit in 1965, it marked a 17-year turning point in the market!" "After bottoming out at 59.5 in June 1984, the U.S. Treasury bond futures embarked on an enormous rally, finally peaking at 105.5 in April 1987, almost exactly as the Golden Ratio had predicted!" "Between 1990 and 1992, a period of great volatility in the currency markets, the Golden Ratio forecast virtually every major top and bottom in the U.S. dollar/deutschemark market!" "In short, The Psychology of Technical Analysis is the bible for traders who want to understand the dynamics of crowd behavior and the financial markets, and who want to capitalize on those rare moves where really big profits can be made."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. It is also the likeliest place within the financial institution where the most recent technologies are implemented before being disseminated in its other businesses. Before the sixties or seventies, the banks' capital market businesses were mostly split in as many departments, sometimes scattered in several sites, as market segments: money market (domestic and currencies), foreign exchange, long-term financing, exchange, bond market... This book is about arming investors with one simple tool that will enhance the investment decision-making process - the chart. It is not the Holy Grail and even if applied exactly as offered there is no guarantee that the reader will be successful. But owning a high quality hammer is no guarantee that the user will build a beautiful house. The hammer is a tool and in most cases the user will still need other tools - and knowledge - to build that house. What this book will do is give the reader the basics needed to look at a chart and get a feel for what the market or individual stock is doing. It will cover only the nuts and bolts of chart analysis, barely touching upon the next level concepts and definitely leaving the whiz-bang stuff well alone.

Inhaltsangabe:Introduction: The following paper will outline the suitability of Technical Analysis (TA), regarding selective chosen tools for performance increase versus the classic Buy-and-Hold-Strategy (BHS). These two approaches, beside the Fundamental Analysis (FA), are the foundations used by investors concerning their Investment strategy and differ substantially in their nature. Thereby, this dissertation will investigate whether the application of active TA is a productive approach, yielding to favourable results and having the ability to outperform the passive BHS. To achieve substantive results, the comparisons of performances will be stretched to 21 years and are based on the following three indices, which differ significantly concerning their location, volume and importance. Standard & Poor s 500 (S&P 500). German Stock Exchange (DAX). Japanese Nikkei 225 (N225). However, to reinforce the impression of the analysis, semi-annual and annual performances will also be measured. This is an essential element of the comparisons, as due to the nature of TA, the seed capital of 1.000.000 Sterling will not be invested at all times. In this case, the capital will yield the current base rate of interest of the Bank of England minus 0.5 % per annum. The measurements will be assessed by means of three established Indicators and Oscillators. Indicators: Exponential Moving Averages; 200 days and 100 days. Moving Average Convergence Divergence. Bollinger Bands. Oscillators: Relative Strength Index. Slow Stochastic. Momentum. TA can be divided into Chartism and the statistical based TA. Although a clear demarcation between these groups is not given in reality, as most proponents of TA combine both techniques. The vast majority of this dissertation will only reflect the latter. This can also be justified, as Chartists predict future price developments based on trend lines, patterns and formations. Murphy (1999) states that all Chartists are Technical Analysts, but not all Technical Analysts are Chartists. Due to the lack of standardised price characteristics, Chartism implies a high degree of subjectivity. Therefore, the absence of operational ability of this sub-area would not lead to a feasible analysis concerning an increase in performance. We maintain that financial markets are either moving in boom or bust cycles (Bull or Bear Markets). The classic BHS, based on the Investment-Legend Benjamin Graham, has generated high profits in the [...]
