The motivation underlying our development of a "handbook" of creativity was different from what usually is described by editors of other such volumes. Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization, nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference. Instead, this handbook was conceptualized as an attempt to provide structure and organization for a field of study that, from our perspective, had come to be a large-scale example of a "degenerating" research program (see Brown, Chapter 1). The handbook grew out of a series of discussions that spanned several years. At the heart of most of our interactions was a profound unhappiness with the state of research on creativity. Our consensus was that the number of "good" works published on creativity each year was small and growing smaller. Further, we could not point to a journal, text,

or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity. At the same time, we were casting about for a means of honoring a dear friend, E. Paul Torrance. Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views.

Spreen and Risser present a comprehensive, critical review of available methods for the assessment of aphasia and related disorders in adults and children. The authors explore test instruments and approaches that have been used traditionally for the diagnosis of aphasia, ranging from bedside screening and ratings, to tests of specific aspects of language, and to comprehensive and psychometrically standardized aphasia batteries. Coverage of other methods reflects newer trends, including the areas of functional communication, testing of bilingual patients, psycholinguistic approaches, and pragmatic and discourse-related aspects of language in everyday life. The authors also examine the expansion of language assessment to individuals with non-aphasic neurological disorders, such as patients with traumatic brain injury, lesions of the right

hemisphere, the healthy elderly, and individuals with dementia. Taking a flexible and empirical approach to the assessment process in their own clinical practice, Spreen and Risser review numerous test instruments and their source for professionals and students-in-training to choose from in their own use. The introductory chapters cover the history of aphasia assessment, a basic outline of subtypes of aphasia- both neuro-anatomically and psycholinguistically-, and the basic psychometric requirements for assessment instruments. The final part discusses issues in general clinical practice, specifically questions of test selection and interpretation. The book is a thorough and practical resource for speech and language pathologists, neuropsychologists, and their students and trainees.
